```

Probabilistic reliability analysis

```
% Probablistic models of variables
inputOpts = defineProbabilisticModels(section, forces);
```

Přidání skutečných dat ročních maxim

```
% 1. Načtení dat
data = readtable('data_Ruzyne.csv');
roky = data.Var1;  % první sloupec obsahuje roky
rocni_maxima = data.Var2;  % druhý sloupec obsahuje maxima

% 2. Odhad parametrů Gumbelova rozdělení
pd = fitdist(rocni_maxima, 'Extreme Value');  % Gumbel = Extreme Value Type I
mu = pd.mu;    % location parametr
beta = pd.sigma;  % scale parametr

% 3. Vytvoření proměnné pro UQ lab
inputOpts.Marginals(11).Type = 'Gumbel';
inputOpts.Marginals(11).Parameters = [mu, beta];  % [location, scale]
inputOpts.Marginals(11).Name = 'Sg';  % jméno proměnné
```

Vytvoření vstupního objektu pro analýzu

```
input = uq_createInput(inputOpts);
```

Limit State Function - snow map

end
```

Comparison of Probabilistic and Eurocode Safety Levels

```
%% Reliability Analysis vs. Cross-Sectional Area Ratio
% This section analyzes how reliability index (beta) and resistance-to-load
ratio (R_d/E_d)
% change based on the ratio of actual cross-sectional area (A_g) to Eurocode
required area (A_s_EN)

displayOriginalValues(section,EN);
```

```
Original cross-sectional area values:
Original section area (A_s): 0.001616 m² (1615.93 mm²)
Eurocode required area (A_s_EN): 0.001022 m² (1022.01 mm²)
Original ratio (A_s/A_s_EN): 1.5811
```

```

% Define the range of ratios A_g/A_s_EN to analyze
ratio_range = linspace(0.5, 2.0, 50);  % Ratio from 0.5 to 2.0 times A_s_EN
beta_values = zeros(size(ratio_range));
rd_ed_ratio = zeros(size(ratio_range));

% Store original section area for reference
original_area = section.A_s;
original_EN_area = EN.A_s_en;
original_ratio = original_area / original_EN_area;

% Loop through each ratio value
for i = 1:length(ratio_range)
    % Calculate new section area based on the ratio
    section.A_s = original_EN_area * ratio_range(i);

    % Update the geometry variable in the probabilistic model
    model.a_s.V_x = 3 / 100; % percent
    model.a_s.ratio = 1.00 ;
